SOUTHERN OCEAN

The Hobo-Dyer Equal Area Projection

This new map belongs to the family of Cylindrical Equal Area projections in which the latitude and longitude lines form a rectangular grid. Other projections in this family include the Lambert, Gall, Behrmann, Edwards, and Peters projections. In the present case the "cylinder" is assumed to wrap round the globe and cut through it at 37 1/2° north and south. In order to preserve the equal area property the shapes of the landmasses become progressively flattened towards the poles, but shapes between 45° north and south are well preserved.

DAS Guidelines 2015

Some of the main changes

RSI

- Use maintenance breaths during RSI
- Roc is probably better than sux
- Remove cricoid force during SAD placement
- Nasal supplementation to oxygenation
